To ensure that the boiling water tank meets the highest quality standard our tanks have been independently tested and comply with UK WRAS and European TUV standards.

Our taps have additional built in safety standards with a button sprung handle for dispensing the boiling water or a slide sprung handle to meet the most stringent safety measures.

We offer a full 2 year guarantee on our tank and a 5 year guarantee on our tap. It is essential that your tap filters are changed every six months to maintain the requirements of your warranty. See page 14 & 15 for further details.

WHO WE ARE

Our founders, the driving force behind Kedl Ltd, have over 60 years of experience between them in the KBB industry. Together with their innovative team, they are keen to bring affordable luxury into every Kitchen in the UK. It's now time to ditch the kettle and replace it with a Kedl – the boiling hot water tap which allows you to have water your way.

OUR MISSION

For many years, the price of boiling hot water taps has been prohibitive – an unjustifiable cost for those undertaking kitchen renovations. Kedl Ltd is about to change this philosophy. With our industry approved products available in a range of designs and colours, a Kedl boiling hot water tap will provide the perfect finishing touch to your dream Kitchen.

OUR STANDARDS

All of our boiling hot water systems have WRAS and CE approval, so you can relax in the knowledge that they have been rigorously tested and are compliant with UK safety standards. In addition, our products are manufactured from solid brass and packed with the latest technology.

THE ENVIRONMENT

By installing a Kedl boiling hot water tap you will not only save on water and energy, but also time, money and plastic waste making a more sustainable future for everyone.

THE HEALTHY OPTION

The recommended intake of water is 2 litres per day – that's between 6 to 8 glasses. A Kedl boiling hot water tap will make this a breeze – our unique activated carbon filter delivers pure natural water, free from limescale, chlorine and other impurities.

KEDL SUPPORT

We have an in-house technical team to offer support and assistance. To keep your Kedl boiling hot water tap offering peak performance and to maintain the requirements of your warranty, it is essential that your tap filters are changed every six months. For a monthly fee*, we will dispatch replacement filters for the continuous enjoyment of your Kedl boiling hot water tap.

*See information regarding replacement filters on page 14.

KEDL CLASSIC 3 IN 1

These eye catching taps provide style and design on your countertop while the push button tank sits comfortably in your kitchen cupboard holding 2.4 litres of water at a continuous temperature of 98° C. Both designs feature a practical swivel spout - perfect for filling tall pots!

KEDL DIGITAL 3 IN 1

We also offer a digital tank with an easy to read display and digital temperature LED touch screen. Like the Classic, the Digital has a 2.4 litre capacity but it is 25% smaller than most others on the market. Our taps come in various colour options making a Kedl Boiling Hot Water Tap an effective way to give your kitchen that high end look at an affordable price.

KEDL DIGITAL 4 IN 1

If filtered water is your thing, then this is the tap for you. This innovative Boiling Water Tap combines hot, cold, filtered and boiling water in two classic designs coupled with a double filter unit. These taps also come with built in safety features as standard – a cool to touch spout plus a safety spring lock to prevent scalding.

KD200R (Bacteria and Limescale). Double filter	£159.96 (£39.99 X 4)	£120.00 (£10 per month)	£39.96

FREQUENTLY ASKED QUESTIONS THE BOILING WATER TAP

How does the Boiling Water Tap Work?

Your new tap is plumbed in to a small boiler, which usually fits neatly in under the sink. The boiler tank takes cold water from your existing kitchen cold water feed and heats up the 2.4 litre tank of water. Your normal hot water feed works exactly as it did previously supplied from your main household hot water tank or boiler.

Why do you have the different temperature settings for the water?

You can set the temperature to 5 different settings to give you the temperature you require – remember different teas need different temperatures and never 100c, as this will soil the taste. Temperature will also scald and damage beans which results in giving it a bitter taste.

What are typical uses for the boiling water taps?

Boiling Water Taps replace your kettle and are ideal for making any hot drink requiring boiling water or any cooking application requiring boiling water from boiling your eggs or cooking pasta to blanching vegetables or boiling water to cleaning a floor.

How many cups of tea/coffee will it make before needing to reheat?

We estimate between 5 or 6 typical cups of boiling water before the unit needs to reheat the water.

How long does it take to reheat?

If only one cup is drawn off the tap the heater will be back up to the maximum temperature in under a minute. If fully drawn down it normally takes 4 minutes to get back to maximum temperature. From new or being turned off allow 7-8 minutes. The temperature of the mains water will affect the reheat time.

Are the Boiling Water Taps safe to use?

Yes, often quoted as safer than a kettle, which can accidentally be dropped, or boiling water is spilt.

- 1 By storing the water just under 100c you get the benefits of instant boiling water with no spitting as the pressurised steam is turned back into a liquid.
- 2 The tap spout is designed with cool to touch built in so it never gets hot.
- 3 The tap has a built in boiling water handle with a child safe button so it can not be accidentally turned on and is sprung so when released it automatically turns the water off.

Do you turn them off?

We advise not to turn them off as it costs more to heat up water from cold than keep boiling water hot. The unit is designed to be on constantly to give you the instant boiling water when you require it.

What will one cost to run?

With modern insulation heat loss is minimised and with only 1.5 kw of energy is used to boil the water running costs are estimated to be less than 3p per day.

Do they save money?

It is estimated that a boiling water tank will cost approximately 3 p per day, a single use kettle to boil 1 litre of water is 2p, so if you make several hot drinks a day not only will the boiling water tap save you time but money also.

What are the product dimensions?

To view product dimensions, please scan the QR code at the top of the page. You will be directed to our website where all product dimensions are listed.
